

Fix: SSMS 2012 opening Debug window when pressing F5

Author : contactng

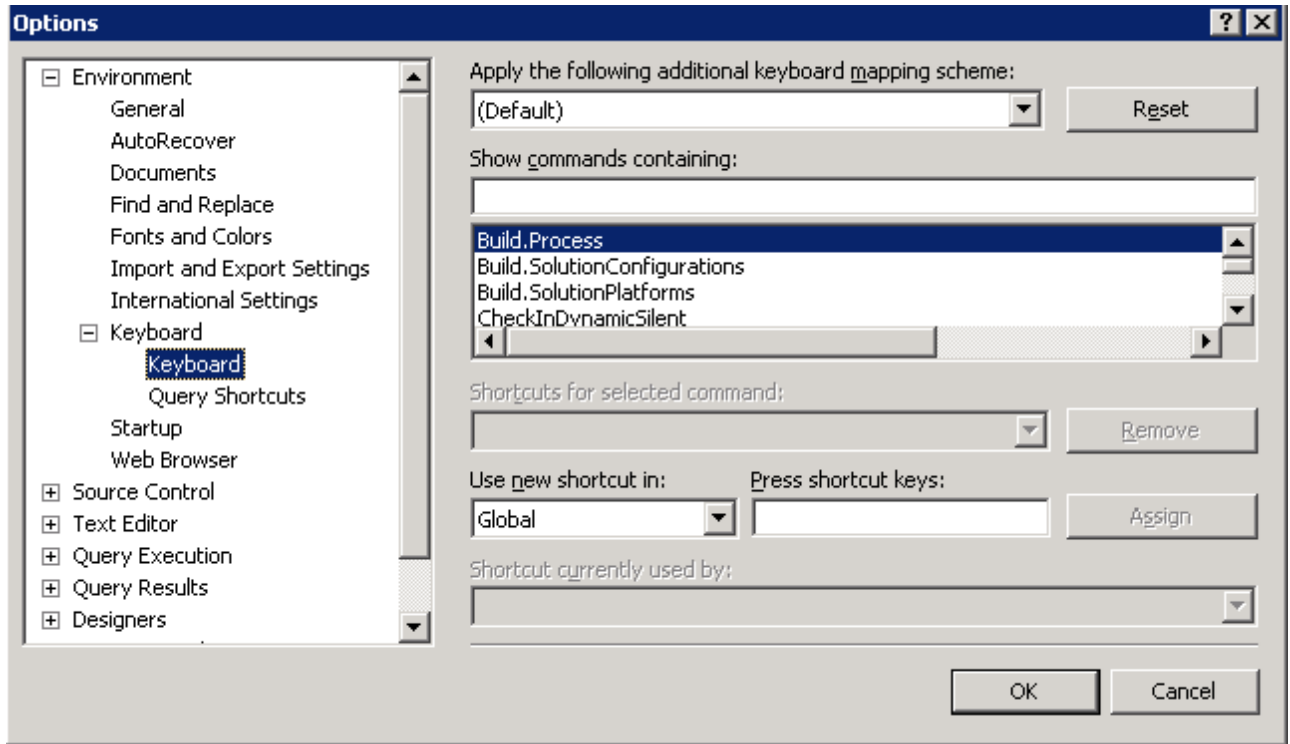

During my evaluation of SQL Server 2014, I happened to face a problem, when I hit the F5 key in the Object Explorer, the SSMS was starting the Debug action instead of Refresh. Usually most of them will be happy for F5=Refresh and F5=Query Execution.

Here is the procedure to Re-assign F5 key to refresh action in SQL Server Management Studio.

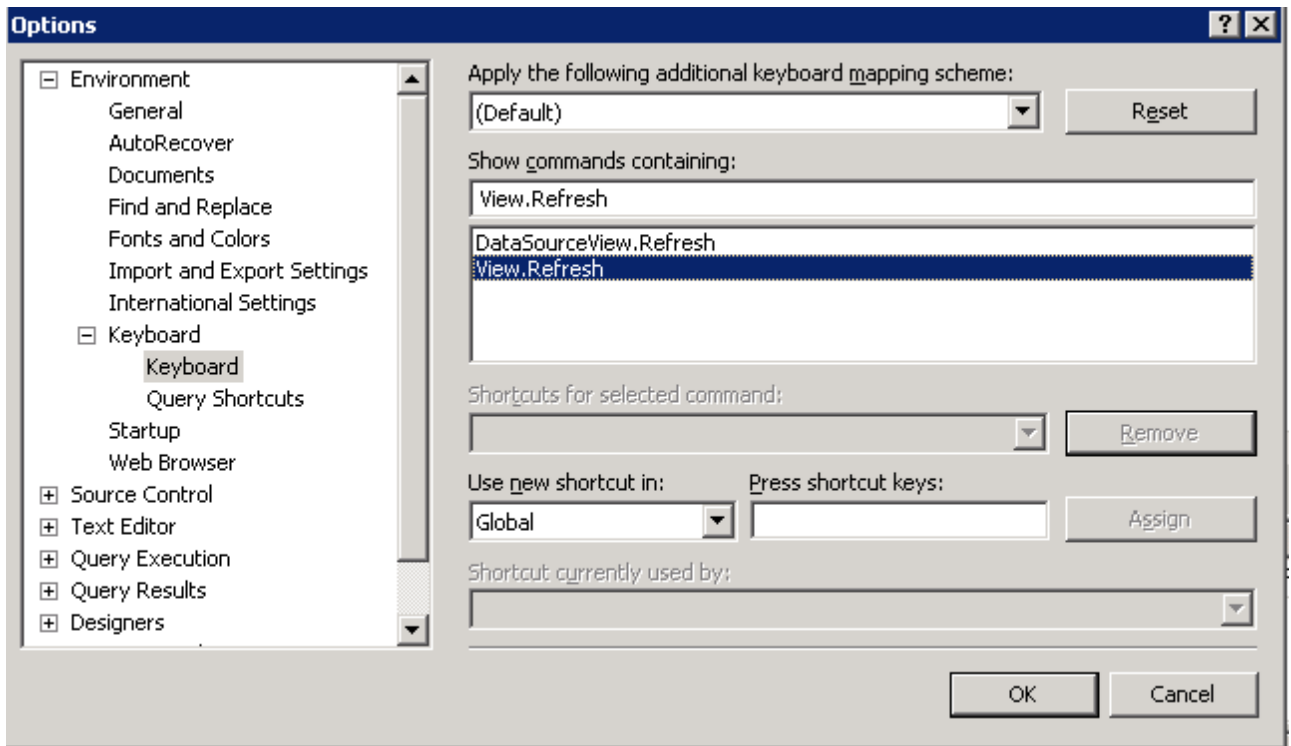

1. Open Management Studio
2. Go to Tools >> Options

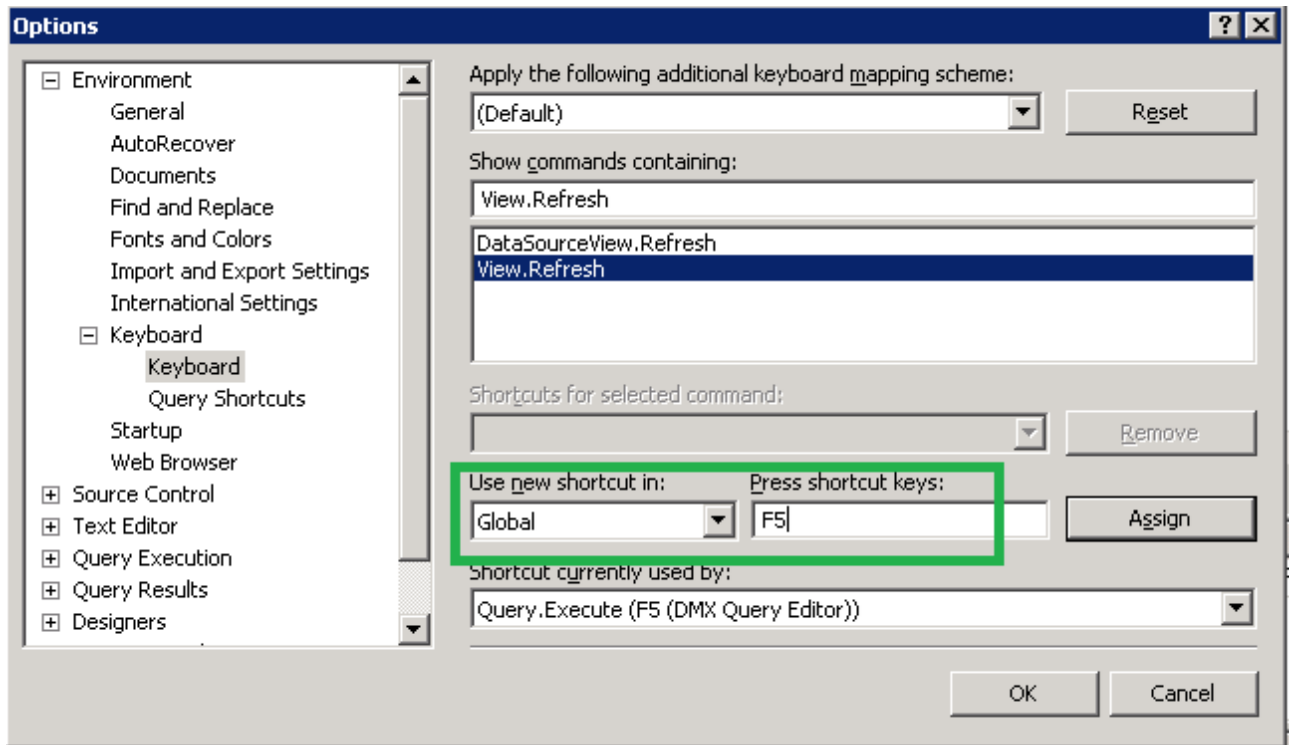

3. Expand Environment >> Keyboard >> Keyboard

4. In the "Show commands containing:", type "View.Refresh" and here you can observe that "Shortcuts for selected command:" will be grayed out

5. Now choose "Global" in the "Use new shortcut in:" and press F5 button in "Press shortcut keys:"

6. Click Assign

7. Click Ok
